with the use of the drug. The matter was then examined in consultation with experts in India and it was opined by the experts that lactic acidosis reported in the West is not common in Indian Population and the drug was effective as an oral anti-diabetic drug. The drug remained available in Spain, Italy, Mexico and some other parts of Europe and continued to be marketed in India also.

Subsequently, the Drug Technical Advisory Board (DTAB) on reconsideration of the matter opined that as large number of oral drugs for treatment of diabetes are now available in the country, the continued marketing of Phenformin may be stopped.

The drug Phenformin has, therefore, been prohibited for manufacture and sale in the country with effect from 1st October, 2003 *vide* Gazette Notification GSR 780 (E) dated 01.10.2003.

New Medical Course
